

Mobile / basement rams

1.75m operational height

Hand portable hydraulic power pack and generator.

Reaction

The most common methods are to either use accro-props so reaction is achieved from ceiling beams, or by anchoring the rams to a concrete floor slab. The latter system uses at least 6 resin injected expansion bolts. A 20 tonne reaction can be achieved.

Test performance

Set up time is on average 1.5 hours per location, with a typical daily performance of up to 40m.
